Education

Faculty of Science – science industry and multimedia (SIM) Department

Skills

Hard Skills (Technologies):

- **Programming Languages:** C#, Python, Java, JavaScript
- **Back-End Development:** .NET Core, Entity Framework, RESTful API Development, User Authentication
- **Database Management:** SQL Server, Oracle, Database Design, Query Optimization
- **Version Control:** Git, GitHub
- **Web Development:** API Development, CRUD Operations, Responsive Design
- **Problem-Solving:** Debugging, Code Optimization, Performance Tuning

Soft Skills:

- Team Collaboration
- Effective Communication
- Critical Thinking
- Adaptability
- Time Management

Projects Highlights

Bookstore API | .NET Core, Entity Framework, SQL Server

- Developed a RESTful API for managing books, authors, and orders.
- Implemented user authentication and role-based access control to secure endpoints.
- Integrated advanced search functionality, pagination, and filtering for efficient data retrieval.

To-Do List API | .NET Core, Entity Framework, SQL Server

- Built a task management API with features such as task categorization, due dates, and CRUD operations.
- Designed a secure user authentication system to manage individual user accounts.
- Improved performance by optimizing database queries and implementing caching techniques.

Database System for a Basketball Club | Oracle

- Designed and implemented a relational database system for managing operations of a basketball club.
- Created tables and relationships to store player information, game schedules, and performance statistics.
- Developed queries and reports for streamlined data analysis and decision-making.

Pinterest-like Website | PHP, JavaScript, HTML/CSS

- Built a web application allowing users to upload, like, comment, and view photos and videos.
- Implemented user authentication and real-time updates to ensure smooth user interactions.
- Designed a responsive layout, enhancing usability across devices.

Encryption and Decryption Program | Java

- Developed a program to encrypt and decrypt user-provided text using custom algorithms.
- Ensured high-level data security through efficient encryption and decryption methods.

Courses

- | | |
|---|---------------------|
| • Backend Development with .NET Core Learn IT & Career 180 | Month-Year |
| A comprehensive course on backend development using .NET Core, covering API design, database integration, and application security. | |
| • Programming with Python Meta | Jul 2024 – Aug 2024 |
| Fundamentals of Python programming, exploring data structures, functions, modules, object-oriented programming, and libraries for scientific computing. | |
| • Introduction to Back-End Development Meta | Jun 2024 – Jul 2024 |
| Covered back-end technologies and systems, including Bootstrap, databases, and security practices, with hands-on projects for real-world challenges. | |

Extracellular activities

OC Member, Semicolon Campus

Nov 2022 – Oct 2023

- Organized and coordinated events, workshops, and coding competitions.
- Collaborated with team members to promote and execute club activities.
- Assisted in the planning and logistics of campus-wide tech events.
